

## Overview: How to Use These Documents

**Authorized User Training Checklist:** This should be permanently posted near harness storage, with copies made available. This should be used when an Authorized Trainer needs to train a new person to become an Authorized User.

**Pre-Use Inspection Checklist:** This should be permanently posted near harness storage, with copies made available. This should be reviewed before each use of fall protection equipment.

**Fly System Operation:** This should be permanently posted next to operational rail as well as loading gallery. This should serve as a reminder about proper fly system operation, but does not replace training by a supervisor.

**Fall Hazard Assessments and Rescue Plans:** These are the individual assessments of each known hazard. These plans should be permanently posted at the location of the hazard and copies made available. **These documents will need a signature by the user each time they are entering a hazard.**

Copies of the manuals for all the equipment in use at each location should be available.

### Overview: Fall Protection PPE Requirements:

Fall protection PPE is required in the following instances:

- In the Louis grid when working over the hatches or performing any risky work
- Entering and working in the loading gallery
- Entering and working in the box boom gated areas

Fall protection PPE is NOT required in the following instances:

- Navigating the grid
- At the fly system operating rail
- Navigating the catwalks
- Outside the box boom gated areas
